About Lung Function Testing

A Lung Function Test helps your doctor understand how your lungs are working and allows them to diagnose your lung condition.

The test is done by a trained Respiratory Scientist or Educator, then reviewed and reported on by a Respiratory Physician. Your results are shared with your doctor or referring healthcare provider.

Free lung tests are available for kids over 4 and adults through First Nations health services and at Respiratory Care WA's clinics in Perth and the South West.

You are welcome to bring a support person with you to your appointment.

What to expect during your spirometry test.

1. You'll meet with a trained Respiratory Educator who will explain the test and answer any questions.
2. You'll sit comfortably while a soft clip is placed on your nose to help you breathe through your mouth.
3. You'll be given a clean, single-use mouthpiece connected to the testing device.
4. You'll place it in your mouth and follow simple breathing instructions from the Educator.
5. The Educator will support you throughout and make sure you're feeling okay.

Before your appointment

We recommend patients avoid heavy meals, smoking, caffeine and strenuous exercise before their appointment and to wear comfortable clothing that will not restrict their breathing during LFT.

If you take any lung medications, your GP/Nurse will provide instructions prior to your appointment as these may affect the accuracy of your results.
